RE: Level 3 400M Track Survey submission Information

All level 3 meets must submit a Track survey showing that the Track is a legitimate 400m Standard track with 100m, 200m and 400m marks within the margin of error documented in the World Athletics Track and Field Manual.

When the track was built the architect would have had a contractor install and strip the track to meet the 400m track standards. They should have received the survey to signify the track does, indeed, meet these standards.

If the track is older the track will have had a restriping company come in and restripe the track and again they should have been given a certified document stating the track meets the 400m standard..

Finally if the school resurfaces their track; they should have been given a document certifying the track meets the 400m measurements.

The track does not have to be WA certified but does have to meet the WA standards for a Standard 400m Track as described in the WA Track and Field Manual or the specifications in the National High School Association or for colleges the NCAA standards. All come from the WA documents.

Below are the links to the WA Manual and to examples of acceptable to ATFUSA Certification documents:

WA Track and Field Manual : [track and field facilities manual 2019 edition - c \(2\).pdf](#)

One page certification documents: [Example 1](#) [Example 2](#)

More comprehensive Restriping certification report: [Example 3](#)

Regards

ATFUSA, Chair
